presents Winter Bootcamp

Winter Bootcamp · 1st-year B.Tech / Engineering · All branches · 100% online

Python Programming & Mentorship Bootcamp

Your first year. Your first real coding skill.

Don't just collect certificates. Build skills you can actually use.

```
first_year.py

for week in range(1, 5):
    learn(); practice(); test()
build("my first real project")
```

Last date to register: 3 October 2026, 11:59 PM

Classes start 5 October 2026

What is this bootcamp?

A structured, practical Python foundation for first-year engineering students. It is not a CSE-only program and not an advanced professional course. You start from zero, write code in every class, and finish with a project you built yourself.

Who is this for?

First-year students from engineering colleges across Odisha, from any college. No prior programming needed.

CSE IT ECE EEE Electrical Mechanical Civil Chemical Biotechnology
Metallurgy Other branches

Start early. Build your foundation.

AI, automation, data analysis and software tools are becoming relevant across many engineering disciplines. Python is a practical language that helps you build:

- ✓ Programming fundamentals
- ✓ Logical thinking
- ✓ Problem-solving ability
- ✓ Data handling skills
- ✓ Automation skills
- ✓ A base for AI, Data Science, Web Development and more

You don't have to wait

You don't have to wait until your final year to start building technical skills. First year is the best time to begin.

Python is not mandatory for every engineer and does not guarantee a job. It is a strong, useful foundation.

Why this bootcamp is different

6

Only 6 students per batch

Small batches for individual attention, interaction and doubt solving.

M

Personal mentor

Personal mentor support and one-to-one communication on WhatsApp.

T

Weekly test + live analysis

One test every week, then live discussion of the paper and common mistakes.

P

Hands-on project

Apply what you learn by building a practical Python project.

N

Class notes + coordinator

A batch coordinator makes sure notes and key materials reach you on time.

+

Extra mentor support

More guidance when you face difficulties beyond regular class discussion.

What you will learn: a 4-week journey

Three live classes and one weekly test every week. Each class is 2 hours.

Week 1

Python fundamentals

Build your base: write and run real programs from day one.

Test 1

Fundamentals + control flow

1

Class

Introduction & first programs

5 Oct 2026 · 2 hours live

- Introduction to Python
- Python environment and online coding
- First Python programs
- Variables and data types
- Input and output
- Basic operators

2

Class

Decisions in code

7 Oct 2026 · 2 hours live

- Conditional statements
- if / elif / else
- Logical operators
- Comparison operators
- Problem-solving exercises

3

Class

Loops

9 Oct 2026 · 2 hours live

- for loop and while loop
- break and continue
- Nested loops
- Programming practice

Week 2

Data structures & functions

Learn to store, organise and reuse data and logic.

Test 2

Strings + data structures + functions

4

Class

Strings, lists and tuples

12 Oct 2026 · 2 hours live

- Strings and string operations
- Lists
- Tuples
- Practical exercises

5

Class

Sets and dictionaries

14 Oct 2026 · 2 hours live

- Sets
- Dictionaries
- Choosing the right data structure
- Practical data-handling problems

6

Class

Functions

16 Oct 2026 · 2 hours live

- Parameters and arguments
- Return values
- Scope
- Introduction to recursion
- Problem-solving

Week 3

Advanced Python foundations

Write cleaner, safer and more organised Python.

Test 3

Modules + exceptions + files + advanced concepts

7

Class

Modules and exceptions

19 Oct 2026 · 2 hours live

- Modules and packages
- Importing modules

- Code organisation
- Exception handling

8

Class

File handling

21 Oct 2026 · 2 hours live

- Reading and writing files
- The with statement

- Context managers
- Practical file-based exercises

9

Class

Pythonic tools

23 Oct 2026 · 2 hours live

- List / dictionary / set comprehensions
- Lambda functions

- Iterators and generators
- Clean, readable Python

Week 4

Object-oriented Python + project

Design programs the way real software is built.

Test 4

OOP + programming concepts

10

Class

Classes and objects

26 Oct 2026 · 2 hours live

- Classes and objects
- Constructors and attributes

- Instance methods
- Class methods and static methods

11

Class

The four pillars of OOP

28 Oct 2026 · 2 hours live

- Encapsulation and abstraction
- Inheritance

- Method overriding
- Polymorphism and composition

12

Class

OOP practice + project start

30 Oct 2026 · 2 hours live

- OOP revision
- Practical OOP problem

- Project architecture
- Implementation guidance
- Debugging and testing

2–4 November: project and final completion

2 November

- Final project development
- Mentor guidance
- Individual doubt solving

3 November

- Project debugging
- Code review
- Final submission preparation

4 November

- Project presentation / review
- Final assessment
- Feedback and program completion

This is a project, mentoring and assessment period, not additional regular 2-hour classes.

How learning works

You don't just watch lectures. You learn a concept, write code, practise problems, test your understanding, analyse your mistakes and apply it all in a project.

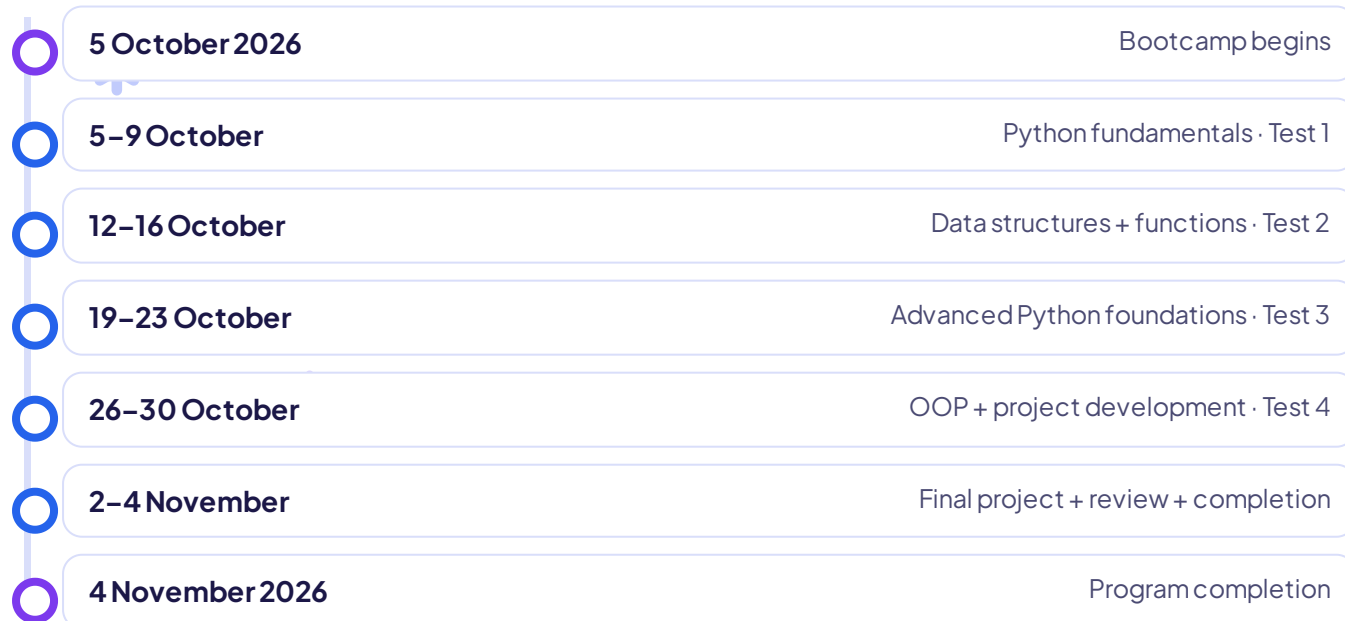

6 students. Personal attention. Real support.

- ✓ Personal mentor support
- ✓ One-to-one WhatsApp communication
- ✓ Doubt-solving assistance
- ✓ Additional mentor support when required

- ✓ Timely class notes
- ✓ Weekly assessment
- ✓ Live test-paper analysis
- ✓ Project guidance

Female students can request a female mentor, subject to availability.

GATE Data Science Qualified

Learn in your comfortable language

ଓଡ଼ିଆ | English | हिन्दी

Preferences are collected at registration; classes follow your batch.

No laptop? You can still join

Core lessons and exercises work on a smartphone with an online Python compiler. A laptop helps with the project but is not mandatory.

What's next?

By the end of the program you should have a stronger foundation in:

- ✓ Python programming and problem solving
- ✓ Data structures and functions
- ✓ Files, exceptions and modules
- ✓ Object-oriented programming
- ✓ Debugging and basic project development

Where you can go from here

Data Science Machine Learning AI

Web Development Automation

Data Analysis Competitive Programming

The aim: no need for another beginner Python course to repeat the fundamentals. This bootcamp alone does not make you job-ready.

Build with us

Students who perform strongly during the bootcamp **may be considered for paid part-time website maintenance work** with our organisation.

This is an opportunity, not a guaranteed job or placement. Selection depends on student performance, technical ability, reliability, available work and organisational requirements.

Don't just collect certificates. Build skills you can actually use.

A certificate can show that you completed a program. But the ability to understand concepts, write code, solve problems and build projects is what you keep using. This bootcamp is about practical learning and application.

Program website

bputnotes.in/winter-bootcamp.html

Full details and updates.

- ✓ Send your name, college, branch and preferred class language (ଓଡ଼ିଆ / English / हिन्दी) on WhatsApp.
- ✓ Register before **3 October 2026, 11:59 PM**. Classes start 5 October.

Batch policy

- **Only 6 students per batch**, to keep learning small and give each student individual attention.
- The program is open to first-year students from colleges across Odisha.
- If demand from a particular college exceeds the available batch arrangement, an additional batch may be considered, subject to capacity and scheduling.
- If a student's admission cannot be accommodated under the published batch allocation policy, the applicable refund policy will be followed.

This program builds skills and does not promise jobs, placement or salary outcomes. Part-time work is an opportunity, not a guarantee.
